

PVC Pipe Protectors (WA/WR)

The unique design of the WR, with vertical ribs and low depth, means that the same size of plug can be used to seal both the plain and connector ends of PVC pipes, which simplifies storage routines. The WA type plugs are longer than the WR and, to ensure full-length insertion, the distance from the end of the pipe down to the seal ring must be greater. The WA design makes it universal protection for both PE and PVC pipes. WA and WR products have ventilation holes for releasing pressure from inside the closed pipe. Packaging-friendly solution, improved logistics and outdoor storage. In this range parts are available with vent hole.

Applications:

The WA and WR types are designed to protect plastic pipes.

Main features:

Ideal solution for plastic pipes

Suitable for Pipes segment

Excellent protection & universal design

Made of LLDPE

Easy mounting & dismounting

Properties

Standard colour: Red - Other colors may be available upon request

Standard material: LLDPE
