

Breathable membrane solution for pipes

Solution with a ventilation hole & breathable membrane

Drinking water pipes need to be closed by sealed plugs to prevent inner contamination from microorganisms, dust, sand or soil. Our solution with the new breathable membrane provides full protection of pipe ends, at the same time allowing air to circulate through the vent hole.

- Sizes: **63 up to 400 mm**
- **50 products**
- **Water, snow & dust resistant**
- The membrane allows **air circulation** and cannot be degraded or broken by UV light or other contaminations

Pipe protected with DBI plug without the membrane (dirt visible)

Pipe protected with DBI plug with the membrane (dirt not visible)
